# WE STAND FOR INDIVIDUALITY AND FREEDOM OF PLANNING

Since 1964, Hasenkopf has stood for craftsmanship, innovation and excellence. Nowadays, we stand out as an expert in the processing of solid surface materials and as a holistic outfitter and project implementer for our partners and customers. At the company's headquarters in Mehring, more than 200 employees are currently working on redefining the limits of what's possible on around 22,000m<sup>2</sup> of production space using the latest technology. Consulting, concept development, visualisation and production are represented together in one place. We unite all of our production and engineering activities under one roof in order to offer holistic

solutions. With a wide range of production technologies, we realise outstanding projects made of premium materials. Chipping, forming and casting processes give us the opportunity to create individual designs for the sanitary ware residential or medical areas, facades and in- and outdoor projects. Excellent carpentry refines solid surface materials from renowned manufacturers and from our own production,

as well as wood-based materials, precious metals, fabrics and textiles, glass, mirrors and sophisticated lighting systems – all from a single source and in the highest quality, from unique pieces to series production.

## MATERIALS AND FUNCTION INTEGRATION

- Large selection of mineral and wood materials in various thicknesses
- Wide range of colours and structures for the realisation of your design idea
- Combined installation with a variety of other materials possible: e.g. solid wood, decor/Fenix®- and HPL-layered MDF, chipboard, multiplex board, precious metals, glass, mirrors and fabrics.
- Customised substructures and furniture carcasses
- Planning and integration of lighting and electronic applications

## SERVICE AND EXPERTISE

- A personal contact to provide technical and commercial support throughout the entire assignment
- Provision of material and color samples
- Development of individual product designs along technical possibilities and customer ideas
- Creation of CAD drawings and visualisation with 3D models for better illustration
- Ready-to-assemble dispatch, including installation upon request by experienced specialists on-site
- Professional maintenance, care and refurbishment of the finished objects

## TECHNICAL PROCESSING POSSIBILITIES

- Extensive, modern processing technologies:
  - High precision chipping by our large number of 3- and 5-axis CNC machinery
  - Special casting processes for basins and tub bodies
  - Bending of solid surface panels for two- and three-dimensional object construction
  - Assembly without visible joints
- Realisation of three-dimensional, organic and polygonal designs
- Individual batch size according to customer requirements, from one of a kind pieces to series production
- Surface finish from matt to shiny, from velvet-like to deep texture
- Personalisation with lettering and logo by milling, inlays or raised structures
- Translucent milling for backlighting

# YOUR BENEFITS

As a universal processor of solid surface materials, we offer the perfect solution for every request. Our holistic range of services covers all aspects of project development and support. From vision to installation – our experienced experts will accompany you every step of the way. We provide our customised products on request with extensive additional processing and finishing at the factory. We also supply the matching substructure for the counter, the matching drawers with siphon cut-outs and the fitting lighting concept for your bathroom.

## REALISE YOUR INDIVIDUAL REQUIREMENTS

of quality and design through our customised solutions for every situation

**SAVE TIME** with easy-to-clean, homogeneous surfaces requiring low cleaning effort

Receive a **HOLISTIC CONCEPT IMPLEMENTATION** by our professionals with decades of experience

Benefit from **SUSTAINABLE PRODUCTION** with resource-saving use of materials and energy-optimised manufacturing processes

Get long-lasting products of **HIGHEST QUALITY**

Optimize your planning by short-term implementation and **RELIABLE DELIVERY** of our products

# ROOM CONCEPTS

ELBPILHARMONIE

Hamburg

The Elbphilharmonie in Hamburg – a world-class concert hall, already legendary for its breathtaking architecture and acoustics. Responsible for that are more than 10,000 individual wall and ceiling elements made out of GIFAtec®. For the perfect orchestral sound, Hasenkopf milled over 1 million shell-shaped elements into the surface of the so-called “white skin“. Using modern 5-axis CNC technology, this was done in precise accordance with the computer-calculated acoustic model of the hall. The result is an audiovisual concert experience at the highest level.

# COUNTERS

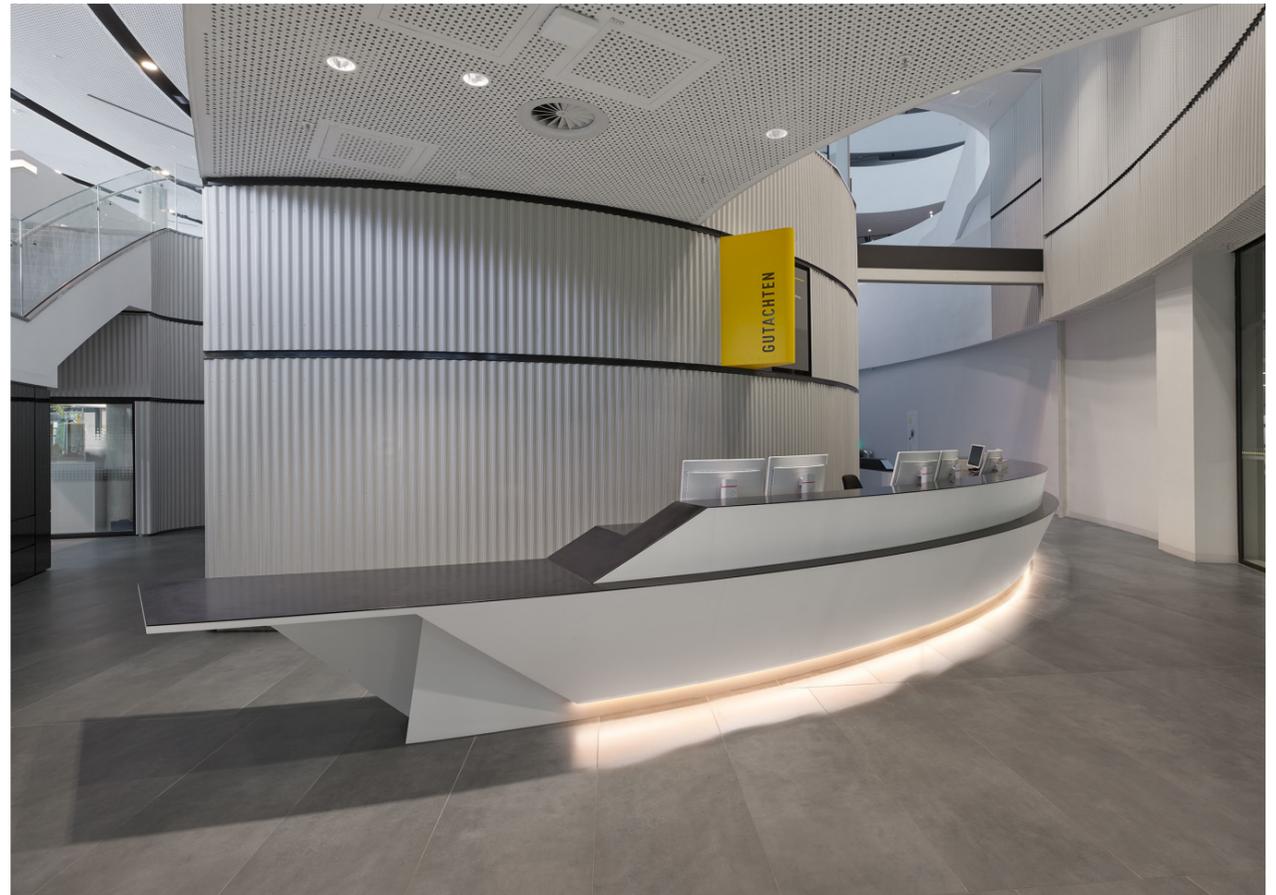

DOX

Düsseldorf

Hasenkopf provides holistic solutions in counter construction: from straight-line counters with a clear design concept, polygonal counters with precise angles and nested surface to two- and three-dimensionally shaped counter fronts that combine aesthetics and functionality in a smart way – all individually designed counters can be equipped with different color and material variations, matching substructures and integrated furniture carcasses. On request, the surface is finished with a textured milling or personalised with lettering and logo.

HOLTER

Passau

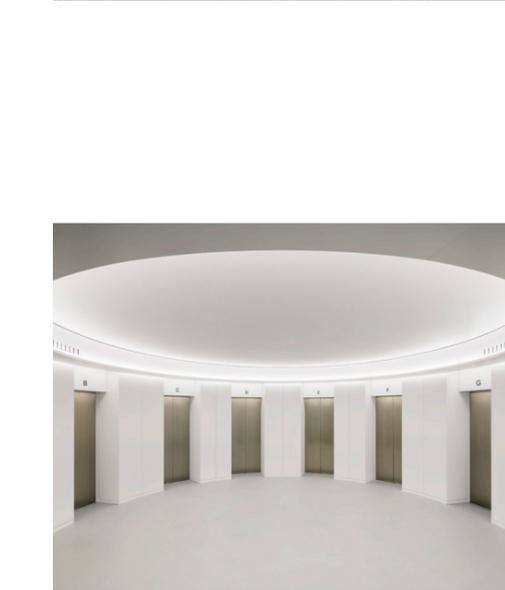

# ROOM & WALL DESIGN

Three-dimensionally shaped solid surface wall elements transform the beauty salon Egger<sup>3</sup> from a rectangular room into a circle-shaped oasis of well-being with a futuristic feel. An asymmetrical mushroom-shaped light made of translucent solid surface material dominates the centre.

It consists of over 60 individual pieces, each 12mm thick, that are bended three-dimensionally and fused into a coherent shape without visible joints. RGB lights attached to the inside allow for different lighting moods that paint the room with shimmering colors.

# CLADDING

The iconic architecture of the 114-metre high HVB Tower is rising above the roofs of Munich. In the process of a comprehensive refurbishment, the interior of the office building is also given a modern look: cladding made of solid surface material covers the lift systems for a new look as well as a modern appearance with clear shapes and forms. The velvety white colour dominates the look of the café area, from the wrap-around panelling of the bar to the design of the tables, and covers the free-standing multimedia displays.

# BATH CONCEPTS

MASTERBAD

For a master bathroom in a private home, Hasenkopf combines the repertoire of different manufacturing techniques for a holistic bathroom concept: a cast bathtub is seamlessly connected to a cover plate made of thermoformed solid surface material, which gently connects the bathtub body to the walk-in shower. The striking sword edge is also reflected

in the design of the washbasin. The ensemble is completed by substructures with indirect lighting and wooden panelling with elegant solid wood drawers – all made by Hasenkopf.

# CONCEPT STUDIES

SPLASH

Designs that are not possible with any other materials! Innovative shapes and functions turned into reality!

In order to live up to this claims, Hasenkopf regularly works with renowned architects and designers to develop visionary studies. "Splash" by Thomas Vietzke combines bathtub,

shower and sink into fluidly connected bathroom furniture of the future. The hollow bodies made of thermally formed solid surface material are equipped with more than 500 backlit inlays made of acrylic glass, which look like water droplets.

# HOTELS

PRIZEOTEL

Hamburg

Hasenkopf offers hotel operators high-quality bathroom and room furnishings, which are individually tailored to the local conditions and the concept of the hotel. From the washbasin of a bathroom to the customised whirlpool cladding of a luxury suite, we provide the right solution for every requirement profile. Even outside the sanitary area, furniture and furnishings made of solid surface material are an excellent choice. Here, Hasenkopf builds customised objects that are aesthetically pleasing and impress as well as withstand daily wear and tear.

STEIGENBERGER

Hamburg

# FACADES

MICROSOFT

Munich

TS11

Vienna

HASENKOPF

Mehring

Brilliant white surfaces made of large solid surface panels adorn the facade of Microsoft's German headquarters in Munich as well as the roof terrace of TS11 in Vienna. The weather-resistant material is perfect for cladding modern building designs on the outside. Hasenkopf has taken it one step further with its own company facade: Rotating slats in front of the reception building, made of curved solid surface material, fulfill a shading function and design effect in equal measure. In combination with a lighting concept consisting of vertical spotlights, the result is a sculptural interplay of light and shadow.

# OUTDOOR OBJECTS

DZ HYP

Hamburg

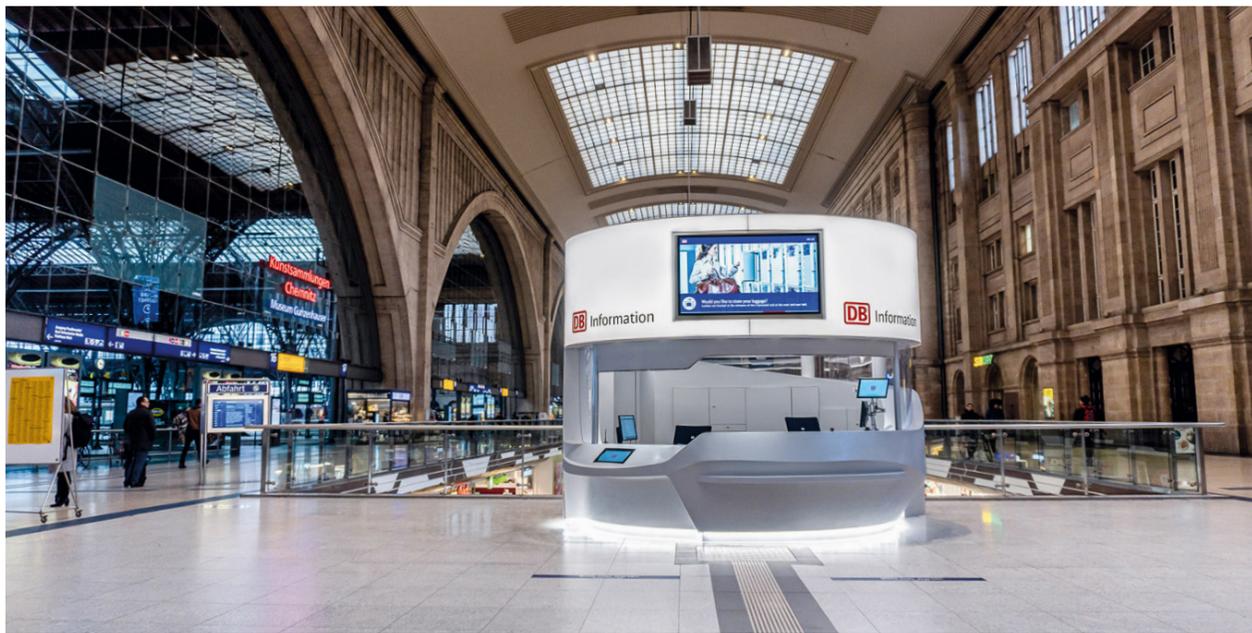

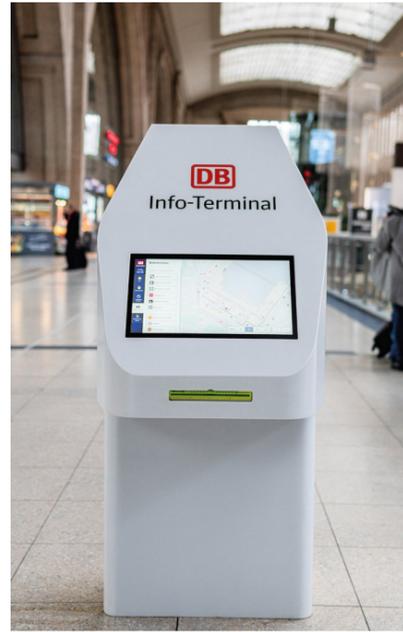

For the organically curved outdoor counter on the roof terrace of the Hamburg real estate bank DZ HYP, Hasenkopf manufactures a 33-metre-long standing counter made of white solid surface material. Resting on a steel base, it elegantly frames the green space, following the shape of a leaf. The surface is curved and polished with a satin finish to keep rainwater out and offer a pleasant feel. To compensate for the unavoidable expansion effects in outdoor areas, the counter is segmented by discreet expansion joints.

# TERMINALS

DEUTSCHE BAHN

Germany

They are lighthouses in a sea of travellers and probably familiar to everyone using public transport: Deutsche Bahn's information counters and terminals at many of Germany's major railway stations. The cylindrical design and the special requirements for a barrier-free as well as durable design present challenges which Hasenkopf is able to

meet with solid surface material and a precise production. This also includes cut-outs for the multimedia interfaces, indirect lighting and interior fittings with custom-built furniture carcasses.

# MUSEUMS

MUSEUM BURG HEINFELS

East Tirol

A castle made of solid surface material – what was once not possible yet, can now be seen at the Museum Burg Heinfels. The use of this material runs as a white thread throughout the permanent exhibition and culminates in a detailed miniature version of the castle measuring just 94cm long and 59cm wide. With fine milling heads, the

large CNC machining centres work the smallest battlement walls and turrets out of the solid surface material. With great care, the individual parts are reworked by hand and can be modularly assembled to demonstrate the castle's history.
